

Patient Registration Procedure

Admissions Department

Document Code: ADM-GL-02

Version: 1.0

Department: Admissions Department

Status: Active

1. Purpose & Scope

Defines the standard procedure for registering new and returning patients at Shifa Hospital across OPD (outpatient) and IPD (inpatient) registration counters.

2. New Patient Registration

- Collect full name, date of birth, gender, CNIC/B-Form number, and contact details
- Capture emergency contact / next of kin information
- Generate a unique Medical Record (MR) number linked to the patient's profile
- Record known allergies and chronic conditions at first registration
- Issue a hospital ID card / MR card for future visits

3. Returning Patient Registration

Returning patients are located using their MR number, CNIC, or registered mobile number. Demographic details are verified and updated if changed since the last visit.

4. OPD vs IPD Registration

4.1 OPD Registration

Used for outpatient consultations. Patient selects or is referred to a department, a token number is issued, and the consultation fee is collected at the counter.

4.2 IPD Registration

Used when a patient is being admitted. Requires an admission slip and triggers the full admissions workflow described in the Patient Admission Guidelines (ADM-GL-01).

5. Data Entry Standards

All fields marked mandatory in the Hospital Management System (HMS) must be completed before the registration record is saved. Names must match the CNIC/B-Form exactly to avoid duplicate MR numbers.

6. Consent & Privacy

Every new patient signs a general consent for treatment and a data privacy acknowledgment at first registration. Patient information is only shared with the individuals listed as authorized next of kin unless the patient specifies

otherwise.

7. Duplicate MR Prevention

Before issuing a new MR number, front-desk staff must search the HMS by CNIC and mobile number to confirm the patient does not already have an existing record.
